LIMITATIONS OF BASEBAND TRANSMISSION

- 1) Baseband signal having small frequency range from 20Hz to 20KHz only. (so no large channel accommodation. It causes the mixing of signals).
- 2) Due to small frequency range, baseband signal cannot travel long distance in free space or air.
- 3) It is inefficient for wireless or radio communication.

SEMICONDUCTOR (Ga-As) LASERS

Introduction :

The semiconductor laser is today one of the most important types of lasers with its very important application in fiber optic communication.

These lasers use semiconductors as the lasing medium and are characterized by specific advantages such as the capability of direct modulation in the gigahertz region, small size and low cost.
